The Ripple Trade team is currently focused on making improvements to the way users add trust lines. The improvements will roll out in two phases:

- **Phase 1**: Replacing “trust lines” with “connect gateway.”
  - Timeline: Roll-out scheduled for August 20.

- **Phase 2**: Allowing users to sign up for gateways directly from Ripple Trade.
  - Timeline: The Ripple team is spec’ing this out and will send it to you for review

**Phase 1**
The Ripple Trade client has a new UI for trust lines! We received feedback that it was hard for your users to grasp the concept of trust lines, and we are taking these complaints seriously. Please update your trust documentation accordingly.

1. **Naming**: We’ve re-named “trust line” to “connect gateway”. This should make it easier for users to understand that they are signing up for a gateway.

2. **Location**: Users now add gateway accounts by going to Fund > Gateways. We think it’s natural that a user would add a gateway in the “Fund” tab because gateways are used to depositing funds into accounts as illustrated below.
4. **Better default options for normal users**: Users don’t see the Rippling option when connecting a gateway, and the trust lines have Rippling OFF by default. Nor do they see any incoming trust lines.

5. **Advanced settings for gateways or power users**: Advanced users have the option to see trust line Rippling options or view incoming trust lines. In order to see that, users go to **Gear wheel > Settings > Advanced**, and turn on the advanced trust lines options.
